

Junior Scientist at Sensible Biotechnologies

Location: Bratislava, Slovakia

Type: Full-Time

Education required: Master's degree in Genetics, Biochemistry, Molecular Biology.

Experience: Industrial wet-lab experience in biotechnology is an advantage.

Salary: EUR 1,200 to 2,000

Overview

Sensible Biotechnologies is offering a full-time Junior Scientist position at our laboratory in Bratislava, Slovakia. This role offers generous compensation, significant non-financial benefits, and the opportunity to learn from global scientific and business leaders.

Required Technical Skills

- Proficiency in molecular cloning techniques, including primer design, PCR, gel extraction, and transformation.
- Experience with protein purification and protein analysis, including the work with immunoblotting, ELISA, and chromatography techniques.
- Experience in scientific note taking and data management.
- Experience with yeasts or mammalian cells (**preferred, but not required**).

Non-Technical Skills

- Ability to process and present scientific results.
- Strong scientific acumen and curiosity.
- Meticulous attention to detail and organisation.
- Ability to work independently with a proactive and “can-do” mindset.
- Full working proficiency in English; Slovak or Czech proficiency is welcomed.
- Willingness to perform.

About Sensible Biotechnologies

Sensible Bio is a venture-backed startup working at the forefront of biotechnological research. We are developing a novel cell-based mRNA biomanufacturing method for vaccines and therapeutics, for uses including for rare diseases, oncology, pandemic prevention and beyond. With laboratories in Bratislava (SK) and in Oxford (UK), we seek to hire leading scientific talent.
